

Early Attrition Risk Analysis — HR Insights

Introduction

Employee attrition increases hiring costs and disrupts organizational performance. Early-stage attrition—employees leaving within their first year—is especially costly because companies fail to recover recruitment, onboarding, and training investments.

This project analyzes HR attrition data to identify early attrition patterns and highlight roles and departments with higher risk, enabling HR teams to take targeted retention actions.

Abstract

This project focuses on analyzing employee attrition with an emphasis on early exits (within 12 months). Key metrics such as overall attrition rate, early attrition percentage, and average tenure of leavers were calculated using HR data.

The analysis shows that while early attrition is not the majority, it forms a significant portion of exits and represents a higher financial loss. The dashboard identifies departments and job roles where early attrition is concentrated, supporting data-driven HR decision-making.

Tools Used

- Microsoft Excel – Data review and validation
- Power BI – Data modeling, DAX calculations, and dashboard creation

Steps Involved in Building the Project

1. Data Understanding & Cleaning
Reviewed employee records, verified date fields, and identified attrited employees.
2. Problem Definition
Defined early attrition as employees leaving within 12 months due to its high business impact.
3. KPI Creation
Created metrics for overall attrition %, early attrition %, and average tenure (months).
4. Dashboard Design
Designed KPI cards and charts to analyze early attrition by department and job role.

5. Insight Generation

Interpreted results to highlight high-risk areas for HR intervention.

Conclusion

The Early Attrition Risk Analysis dashboard demonstrates how HR data can be transformed into actionable insights. Although early attrition is not the majority of exits, it represents a costly segment that requires attention.

By identifying roles and departments with higher early attrition, the dashboard helps HR teams improve hiring fit, onboarding processes, and retention strategies. This project emphasizes the importance of problem-driven analytics over simply presenting numbers.
